This is for two main reasons. First, the client and server are now both using the same layer (multitasking). This means that the server no longer gets out of sync with the client when the server is doing time-intensive stuff, such as when it's recovering from a crash. Second, this TU removes the "deterministic" lag modifier from the server. This means that when the server is lagging heavily, clients will still see those lags. It does, however, prevent clients from spoofing the server's lag. 6092 - Minecraft: Xbox 360 Edition Title Update 80.0. Actualizacion de Minecraft Xbox 360.
