The use of HIV drug cocktails with rifampin in critically ill patients: a case series. Survival of human immunodeficiency virus (HIV)-infected patients with severe infection continues to improve as antiretroviral therapy (ART) options expand. The use of rifampin in combination with ART is reserved for treatment-refractory, multidrug-resistant, extensively drug-resistant (XDR), or highly resistant (M184V/I-associated) HIV, or for multidrug-sensitive isolates in the setting of suboptimal adherence. We report the use of rifampin in combination with ART to treat 5 patients with proven or presumed XDR HIV. These patients exhibited improvement in viremia (as measured by HIV-1 RNA viral load), with increased CD4 count, or both, while taking rifampin in combination with ART. These cases underscore the potential role of rifampin in the treatment of XDR-HIV and suggest that the use of rifampin in combination with ART may be safe and effective in patients with multidrug-resistant HIV.

We had a great weekend at Minehead Drama Festival – lots of fun both on and off stage as we performed ‘Sleeping Beauty’ to an audience of over 1000 people. It was a great chance to meet new people, make some new friends and be entertained, and we had a lot of fun too. Big thank you to all the artists, cast and crew and of course the organisers of the festival – we’re really grateful for everything they did!At the clinic of Dr. Francois Ruoquin in Choisy-le-Temple, we perform an analysis of your brain activity by measuring the electrical impulses of your brain at 5 different frequencies: Gamma (40hz), Alpha (10hz), Beta 1 (20hz), Beta 2 (14hz) and Theta (4hz). This new technique is called “EEG Biofeedback” and allows us to make precise recordings of your brain 3e33713323
