Visitations™ is the result of our journey for 10 years combining the cerebral side of electrochemical science with the human experience in developing a new type of therapy that will tackle two major problems, depression and anxiety. Visitations is based on a concept called "phantom pain" where neurochemical changes trigger an experience of pain and distress that is outside the body. Visitations is just that; an illusion that your doctor is inside you. Your therapist is just an electronic device that implants electrodes into your brain. You'll never know which therapist is actually inside you, yet you'll always feel like you're being treated, both by the device and your own body. Visitations™ has been tested by over 450 patients in clinical trials. Patients receiving Visitations have reported that they never have thoughts that they would be treated "like a machine." Patients feel as though they are being treated with a level of comfort and care that no other treatment can provide. Visitations™ is a sequence of invisible "painful" virtual sensations that simulate a real-life experience that a person can control and customize from the comfort of their living room. View your scans, download the software and pick which avatar you want to be for that experience. This form of therapy may be very effective in alleviating depression, anxiety, chronic pain and other chronic pain symptoms. Visitations™ is an interactive experience that is patient-centered. Visitations has been included in clinical testing at the University of Michigan Depression Center and at the University of Michigan Comprehensive Cancer Center and has been recommended by health care providers throughout the country. Visitations is an open-source project and any doctor or health care provider can purchase Visitations software and apply to be a Visitations™ provider. Visitations is medical-grade and FDA approved. Visitations was developed as an open-source project at Lighthouse Research. Fish Story is a game about easy-to-play, hard-to-master music which unfolds in a captivating, award-winning journey, where every new track feels like a journey of discovery. The main character, Hallucinations, is a fish who has to open his eyes and understand the many aspects of his life and his world. This is the Synthwave soundtrack that helped me to create the beautiful soundtrack for Fish Story. Enjoy it outside of the game. Key Features: - 24 synthwave tracks based on emotional expressions from the soundtrack - Original 24-bit 44.1 kHz WAV files - Linear and interactive interface to easily experience the emotional journey of the music - Customize colors, noise and the intensity of the effect by means of sliders - All tracks are designed to be played as arranged in Fish Story - Read the original Fish Story Soundtrack to learn more about the game and the development process. - Perfect for experienced Fish Story players and gamers who are curious about game development. I'm a big fan of its meandering style, and I'm very happy to see that the soundtrack represents it well. I think the demo version of the game is fantastic, the fish stares off into space and the music is minimal but nice. I would love a full-fledged release. This is a fantastic soundtrack. Hope to see more from you in the future, Alex. ? I can tell the demo version of this soundtrack is composed by me. That's pretty awesome. I hope I'm not sounding cocky, but I really love Fish Story and the music is a big part of that. I have a lot of ideas for other types of music, and would love to do more of it. And I know I can do it. I have a lot of ideas for the next volume. I have ideas for several soundtracks I've thought of, but never had time to make. Hopefully I can try some of those ideas out. I'm pleased with your vote of confidence in me. Even though I had a few things I wanted to get accomplished, I still got this finished. I don't think anything I do is ever wasted. All of my ideas, even the ones I don't think of until weeks later, are useful at some point. And even the ones I never get to are useful in developing the next thing. Voted ?
